500 TECH

High-End Development and Consultancy

Development

We deliver sophisticated, long lasting, production software on time. With dozens of production projects under our belt, we have vast experience with numerous development methodologies.

Consulting

Having completed hundreds of successful projects, our consultants can share best practices, avoid common pitfalls and help you save hundreds of development hours.

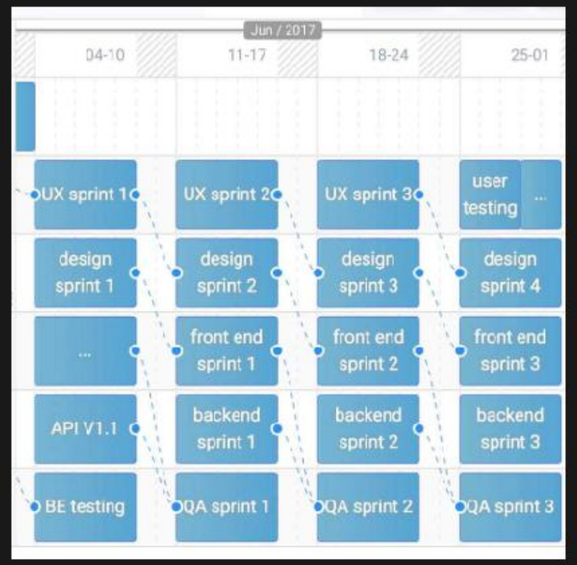
Training

We prepare your development teams to work on large scale projects. Our instructors are ready to help with basic setup and guidance over the initial development phases.

Building complex and diverse projects

We helped Phytech build their realtime farm-monitoring application with React and migrate iOS and Android apps to React Native

Together with jFrog, we worked to rewrite Artifactory, their flagship product for software management and distribution, using AngularJS



We've built Proggio's first project management application with project plan visualization and team collaboration from the ground up.

We helped Unpakt completely rebuild their move booking flow as a single-page application using AngularJS
