

# Do You Need a Service Mesh?

DevDays, Vilnius Lithuania | May 2019

Matt Turner

@mt165 | mt165.co.uk

# Outline

- What are we talking about this?
- How did we get here?
- What is a Service Mesh anyway?
- Demo!
- What can a Service Mesh do?
- Common counter-arguments
- So: Do you need a Service Mesh?

# Pop Quiz!

Why are we talking about this?

# Business Value

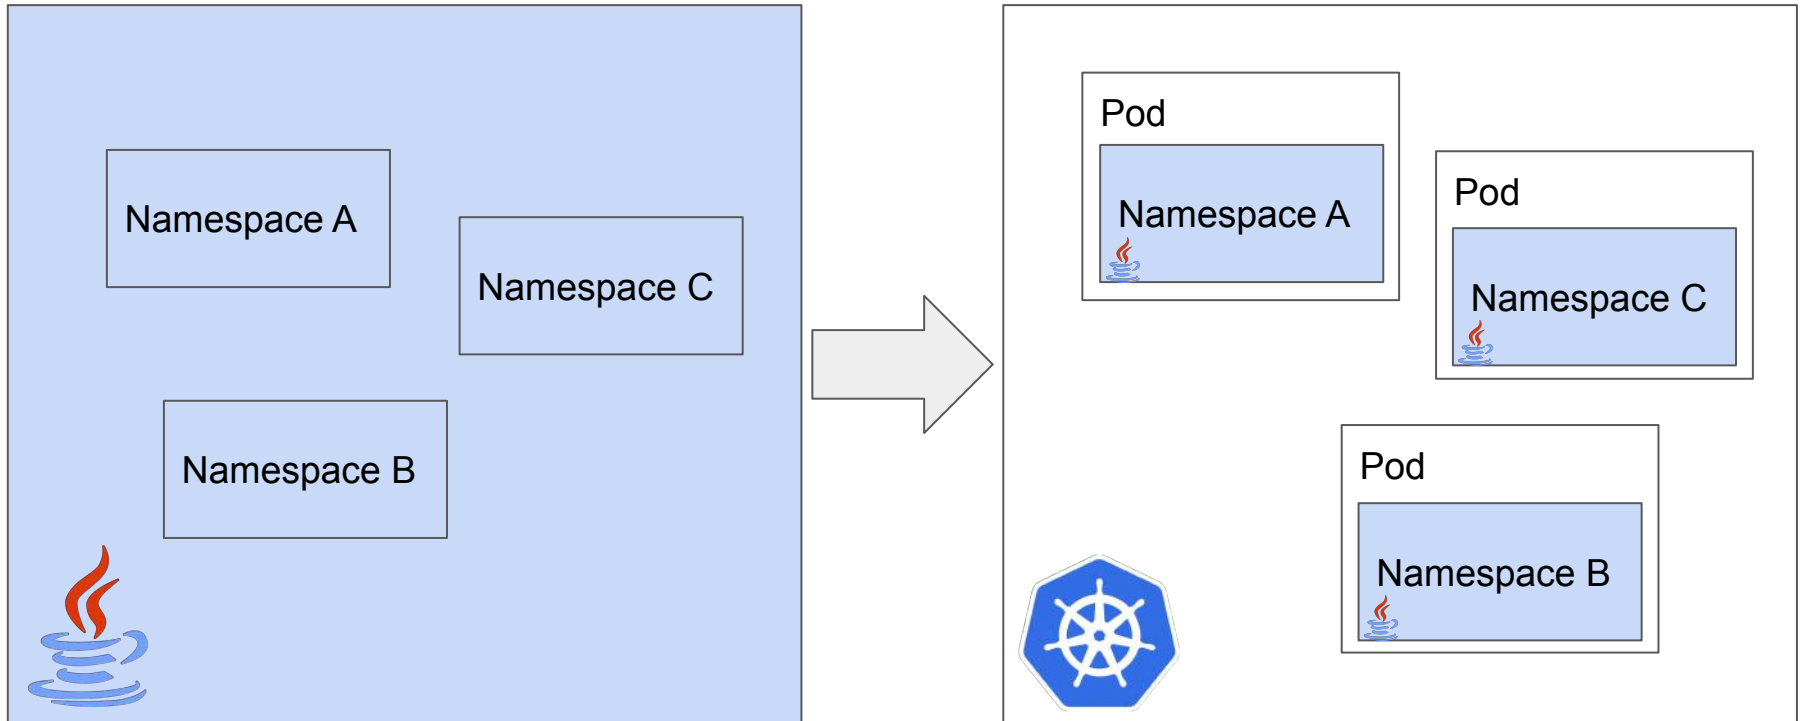

- Top Line
- Bottom Line
- Time to Market & **Speed of Iteration**
- **Risk Reduction**

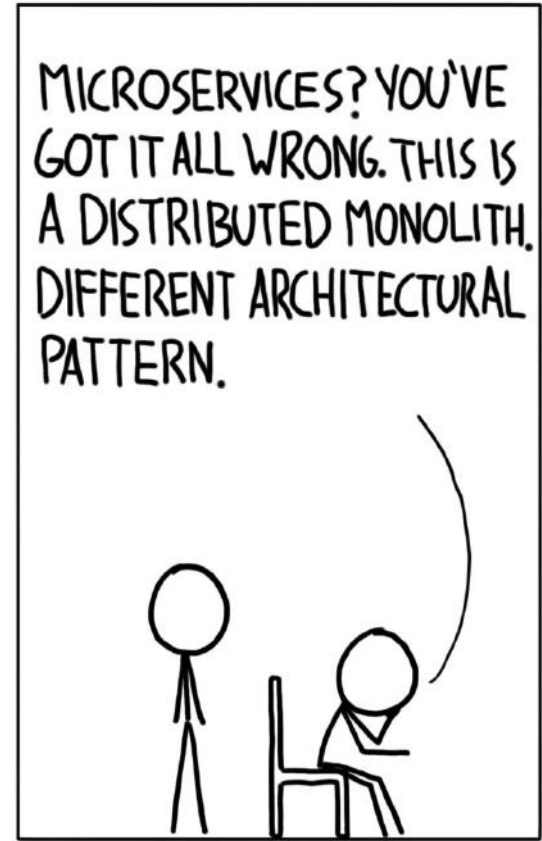

# Break the Monolith

# Break the Monolith

...don't just distribute it!

@SEBIWICB

# How did we get here?

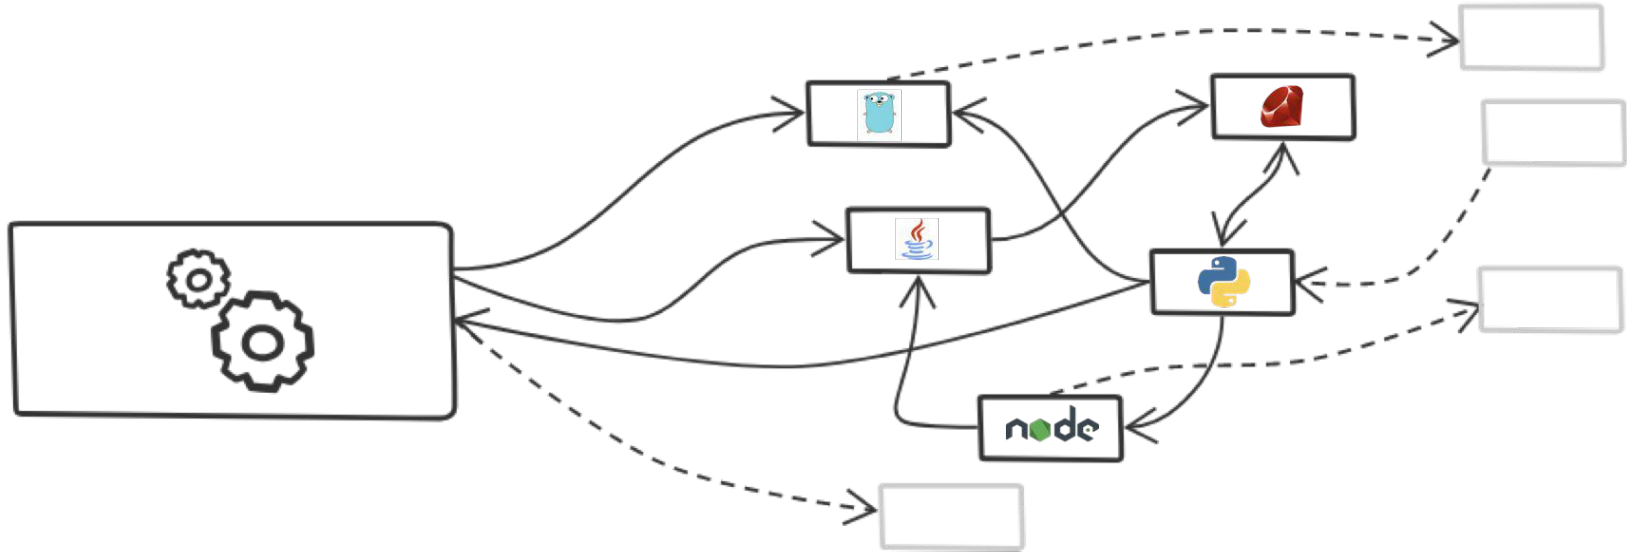

# In-process libraries and frameworks

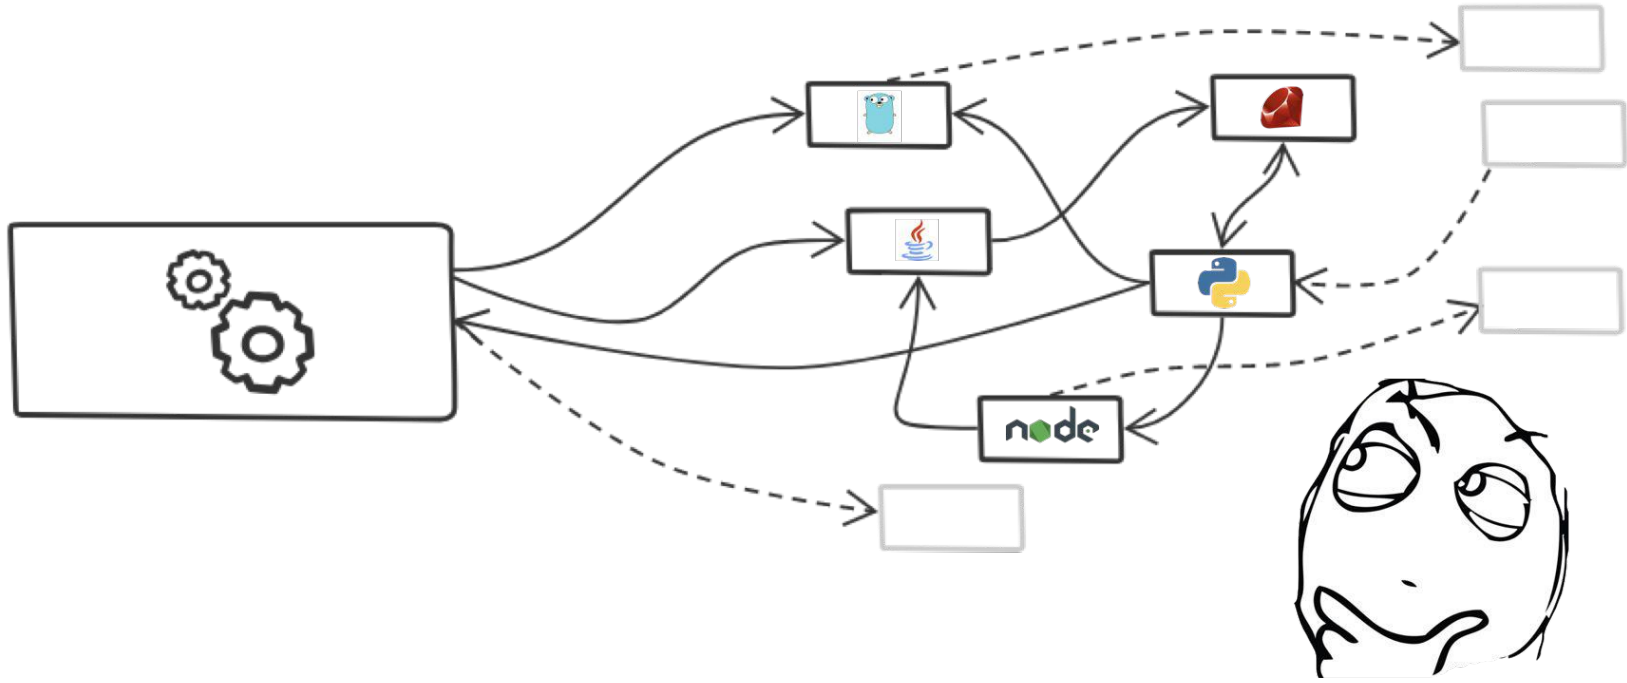

# Polyglot environments

# Polyglot environments

# Must-have primitives

- Service Discovery
- Fault Tolerance
  - Circuit breakers
  - Back pressure
- Observability
  - Logging
  - Metrics
  - Tracing

**We also got here via...**

# Declarative Infrastructure

# And declarative infrastructure

Google Cloud Platform

ANSIBLE

CHEF

# And declarative infrastructure

HashiCorp

**Terraform**

**kubernetes**

**docker**

Google Cloud Platform

**Azure**

**ANSIBLE**

**puppet**

**CHEF**

A Service Mesh is the  
best of both

# What is a Service Mesh?

# They work by adding a proxy to every service

# And a control plane

# Demo Time!

# Pray to the demo gods...

# Pray to the demo gods...

The old...

# Pray to the demo gods...

The old...

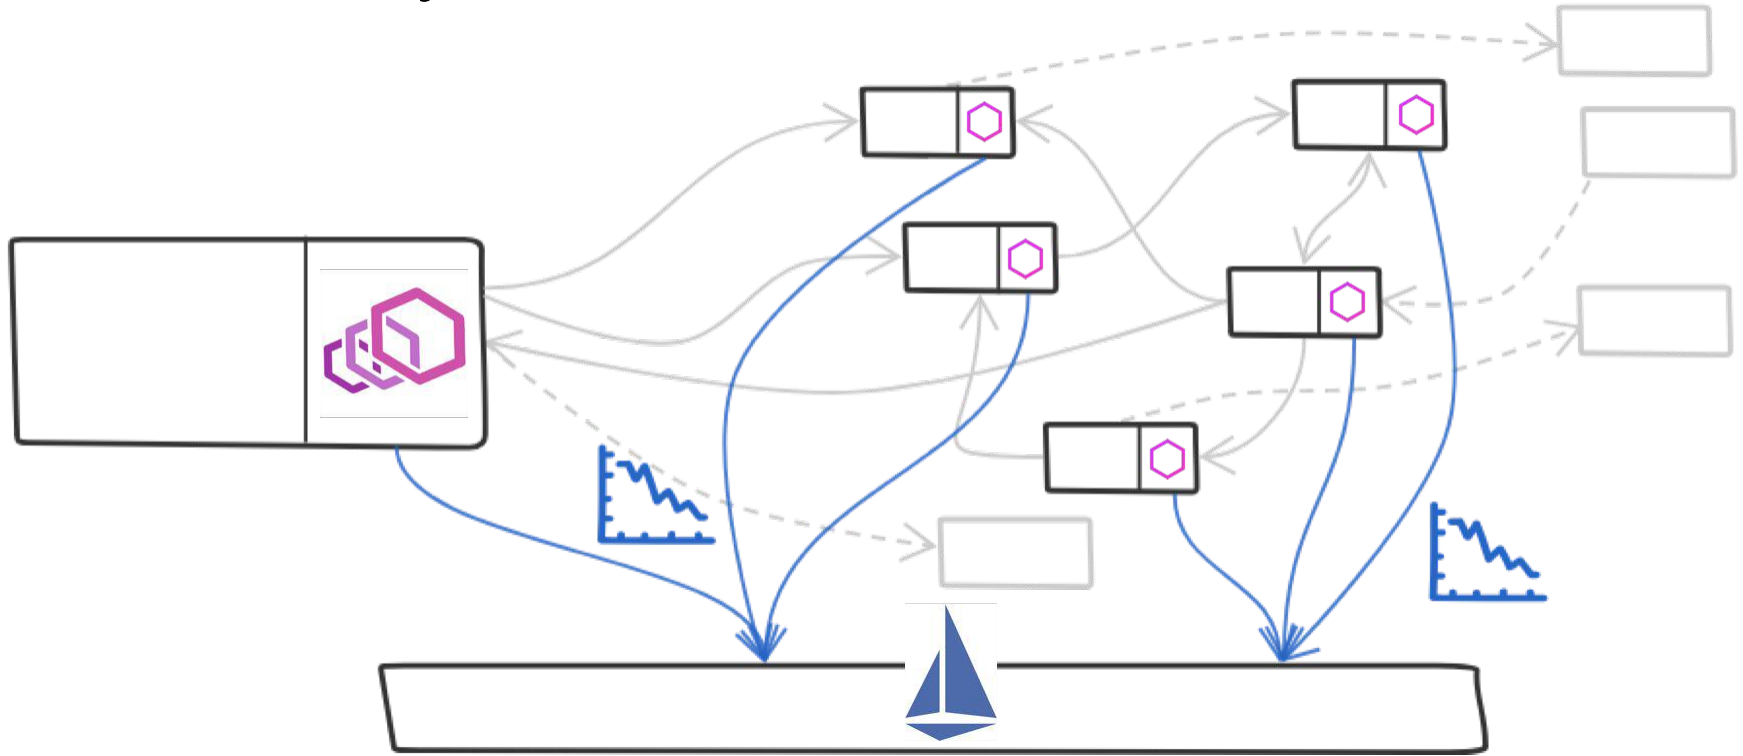

...and the new

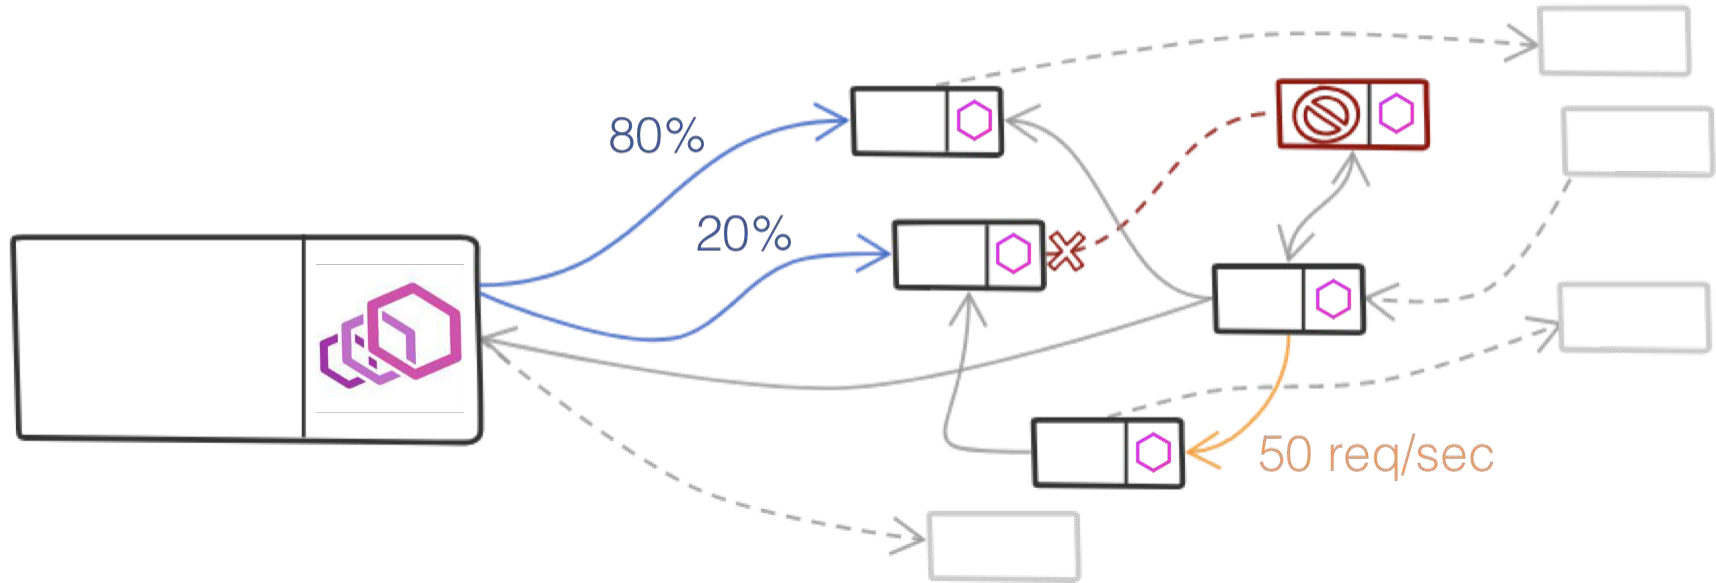

Service Meshes can  
do much more

# Observability

# Traffic Management

# Declarative Traffic Management

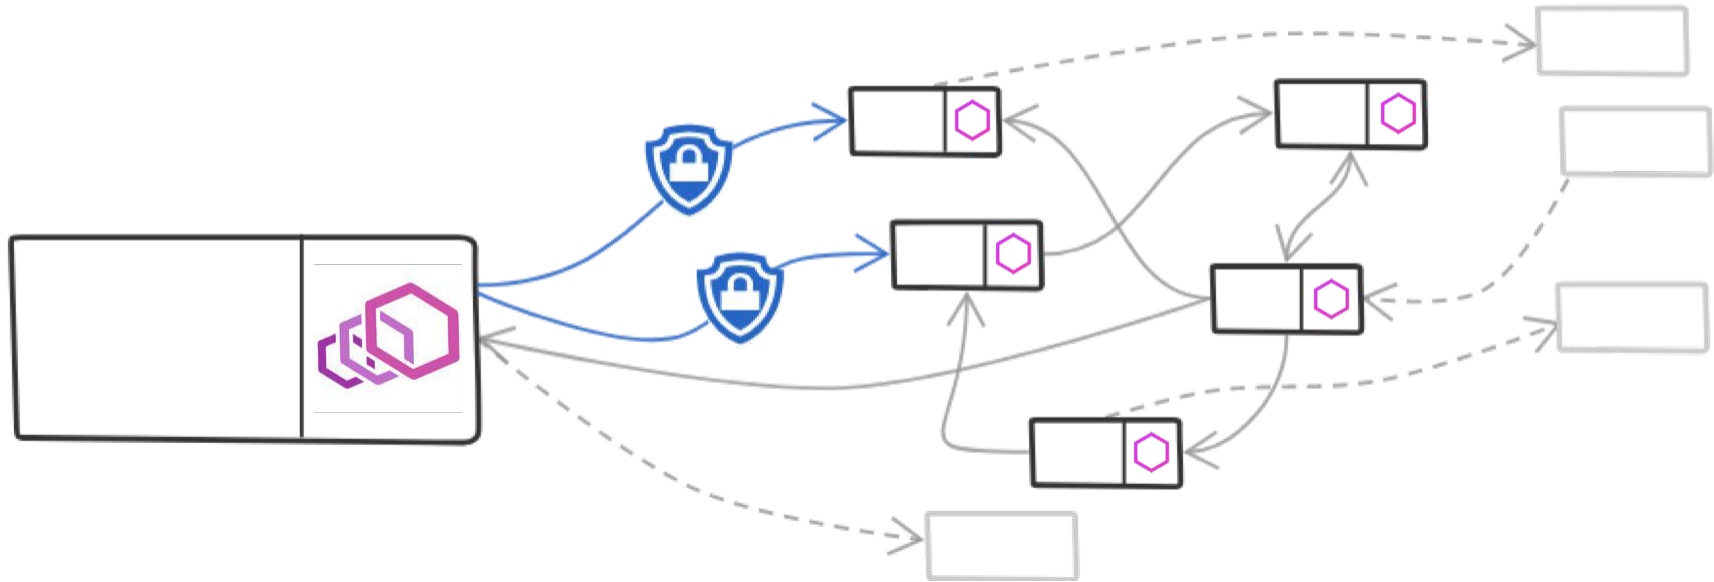

## Everyone gets reviews v1

```
kind: VirtualService
metadata:
  name: reviews
spec:
  hosts:
  - reviews
  http:
  - route:
    - destination:
        host: reviews
        subset: v1
```

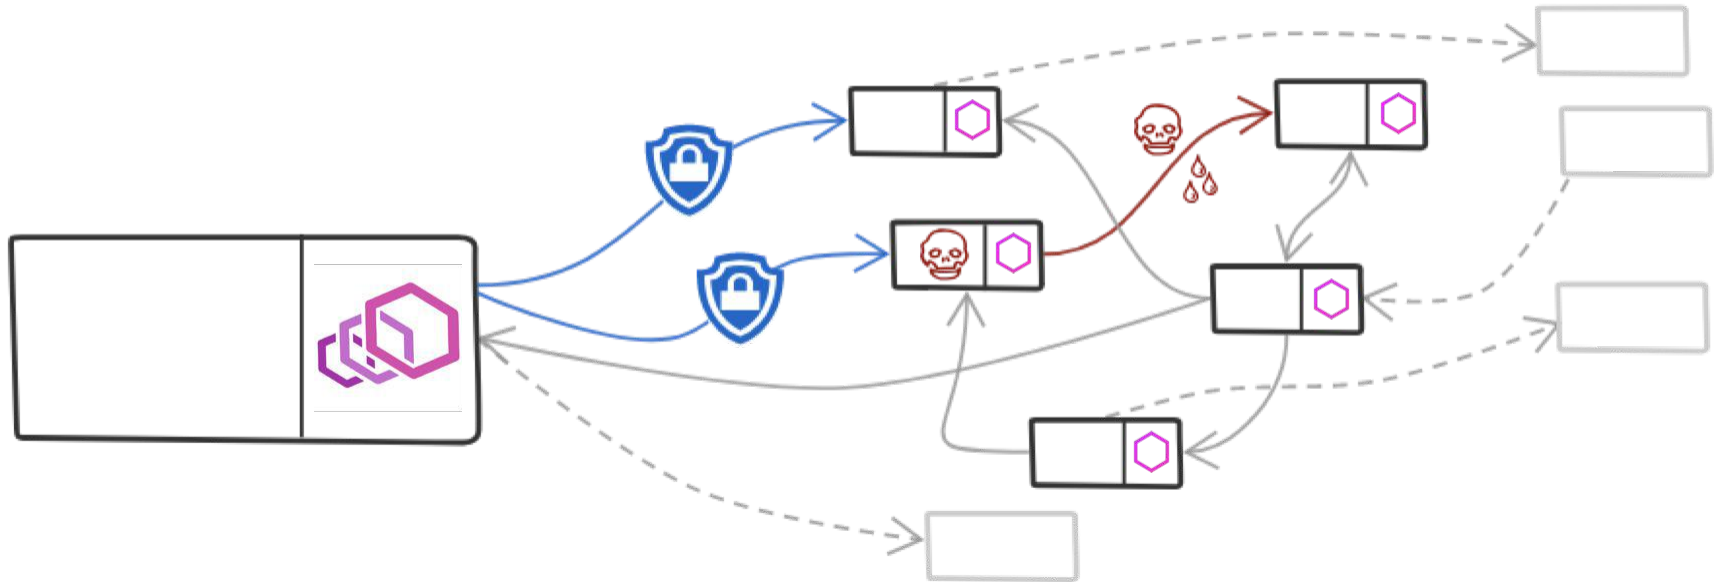

## Except Jason

```
kind: VirtualService
metadata:
  name: reviews
spec:
  hosts:
  - reviews
  http:
  - match:
    - headers:
        end-user:
          exact: jason
    route:
    - destination:
        host: reviews
        subset: v2
  - route:
    - destination:
        host: reviews
        subset: v1
```

# Security - ACLs

# Security - mTLS

# Security - mTLS

**But!**

# But I have an Edge Proxy!

- ✓ Ingress proxy
- ✓ Sidecar model terminates security closer to the app

# But I have an API Gateway!

- ✓ Rate limiting
- ✓ Access control
- ✓ JWT validation
- ✗ OIDC
- ✗ Bot blocking

# But I have a CDN!

Keep it

# But I have a WAF!

Keep it, for now

# But I have an APM system!

- ✓ Logs
- ✓ Metrics
- ✓ Tracing
- ✓ Multiple, arbitrary telemetry backends
- ✗ JVM, .Net CLR insight

# But I have an ESB!

- ✓ Retries etc
- ✓ Flexible service discovery / late binding
- ✓ No client/server distinction
- ✗ Broadcast / pubsub

So: Do you need a  
Service Mesh?

**Yes!**

# It can help in a lot of contexts

Greenfield project	Easy and free advanced functionality
Brownfield project	Adds visibility and control
Multiple languages	No libraries to find and maintain
Old infrastructure	Unified service discovery, policy, etc
New infrastructure	Multi-cluster, multi-cloud are possible
Old services	Protocol canonicalisation, compression
Development	Advanced routing for testing
Production	Resiliency and telemetry

# There are many options

HashiCorp  
**Consul**

★ Star 17,242    🍴 Fork 2,833

★ Star 3,771    🍴 Fork 303

★ Star 15,745    🍴 Fork 2,724

# Istio has the most momentum

Interest over time ?

# Istio has wide backing

Google, IBM, Lyft, RedHat, Cisco, and more

# Istio and Linkerd are (quite) easy to install

Will be managed soon

Go home and try it!

# Recap

- Why were we talking about this?
- How did we get here?
- What is a Service Mesh anyway?
- Demo!
- What can a Service Mesh do?
- Common counter-arguments
- So: Do you need a Service Mesh?

# Thanks!
